

To use the system, run the web application from the visual studio and start the greenhouse module in IntelliJ.

Use the premade account: standard@standard.standard with password: Standard1234!

To send a schedule, click the greenhouse to which you want to send the schedule, fill out the values in the schedule and press apply schedule. Save schedule saves the current schedule, and load overwrites the schedule with a previously saved one.

View live data has no greenhouse selected when you enter the side, so all gauges shows the sensors to be faulty. To view data from your greenhouse click on the greenhouse id. If the JAVA application is not running, all sensors will be shown as faulty.
